Hello all – interesting and enjoyable call, as before.

Here is the SPI comparison of Narragansett Bay from 1988 and 2008 data, also the original study (1988 data).

Between the last study (2008) and 2014, TN loads from the 3 big WWTFs in upper Narragansett Bay (Fields Point, Bucklin Point, and East Providence) have declined more than 50%, so we are scheming to set up a new SPI study in 2018.

Best to all,

Giancarlo.
